Task 1: Comparing Unclear vs. Clear Prompts

Prompts

• Unclear Prompt: "Give me a list of trending songs in India."

• Clear Prompt: "Provide a list of the top 5 trending Bollywood songs released after 2022. Include the song title and the main artist's name for each."

Comparison of Responses (Detail & Relevance)

• Unclear Response Output: The AI will likely generate a broad, generic list mixing different genres (Bollywood, Punjabi, International pop, Indie) from various years. It might omit artist names or release dates, making the results less relevant if you only wanted recent Hindi music.

• Clear Response Output: The AI delivers a highly specific, accurate list matching the exact constraints (Bollywood only, post-2022, limited to 5 songs) with cleanly formatted artist names.

• Key Difference: Adding specific constraints (genre, time frame, specific details like artist name) eliminates guesswork, giving you a directly usable answer without needing follow-up prompts.

Task 2: 3 Common Prompting Mistakes (with Scenarios)

Mistake 1: Being too vague or lacking context.

• Scenario: Ordering food on Zomato.

• Don't: "Suggest something good to eat on Zomato."

• Do: "Suggest 3 highly-rated North Indian vegetarian restaurants near my location on Zomato that offer paneer dishes under ₹300."

Mistake 2: Missing formatting or structural preferences.

• Scenario: Booking a movie on BookMyShow.

• Don't: "What movies are playing on BookMyShow?"

• Do: "List the top 3 action movies currently playing in Mumbai theaters on BookMyShow. Format the response as a bulleted list showing the movie name, IMDb rating, and available evening showtimes."

Mistake 3: Failing to specify the persona or tone.

• Scenario: Writing a complaint about a delayed delivery.

• Don't: "Help me write a message to customer support about a late order."

• Do: "Write a polite yet firm customer service email regarding a delayed Zomato order. Include placeholders for the Order ID and delivery time."

Task 3: Restaurant Review Generation

1. Vague Prompt & Output

• Prompt: "Write a restaurant review for a new café."

• Output: "I recently visited this new café and had a good experience. The food was delicious, and the service was quick. The interior looked nice. I would recommend checking it out if you are in the area."

2. Detailed Prompt & Output

• Prompt: "Write a 3-sentence review for a new Italian café called 'Ciao Bella'. Focus on its cozy, rustic ambience, high-quality wood-fired pizzas, and mid-range pricing."

• Output: "Ciao Bella is a fantastic new addition to the neighborhood, offering an incredibly cozy and rustic ambience that makes you feel right at home. Their authentic wood-fired pizzas are the highlight of the menu, boasting fresh ingredients and a perfectly charred crust. Best of all, the mid-range pricing ensures you get premium Italian flavors without breaking the bank."

Explanation: Which is better and why?

The detailed prompt's output is much better.
By specifying the cuisine (Italian), ambience (cozy, rustic), and price range (mid-range), the AI generated a unique, vivid description instead of generic platitudes. Extra details guide the AI to focus on specific selling points, making the final content realistic, engaging, and directly useful.
Task 4: Content Generation for an App Feature
• Chosen Feature: Instagram's Explore Page (Captions for viral fitness/wellness reels)
• Prompt:"Act as an expert social media manager. Write 3 engaging, short captions (under 20 words each) for an Instagram Explore page post showcasing a '5-Minute Morning Mobility Routine'. The tone should be highly motivating and energetic. Include 3 relevant fitness hashtags at the end of each caption."
