Prompt Type	Prompt Example	Expected Result Quality
Zero-Shot	"Write a Spotify playlist description for a playlist named 'Monsoon Vibes'."	Generic & Broad: Gives a standard, poetic description about rain and music, but might not capture a specific mood or formatting style.
One-Shot	"Example: 'Chill Beats: Sip your coffee and unwind with this lo-fi collection.' Now write one for 'Monsoon Vibes'."	Structured: Mimics the length and tone of the single example provided, making it concise and better suited for a real playlist.
Few-Shot	Providing 3 distinct examples of playlist descriptions (e.g., retro, workout, acoustic) before asking for 'Monsoon Vibes'.	Highly Tailored & Stylized: Exactly captures the specific vocabulary, length, emoji usage, and vibe defined by the examples.

Conclusion: Which method is best and why?

The few-shot prompting method gives the most relevant and highly tailored result.

Why: While zero-shot relies purely on the AI's guesswork, few-shot prompting gives the AI a clear pattern, vocabulary tone, and structural blueprint to follow. This ensures the output perfectly matches the specific aesthetic required for a Spotify playlist.
