Task 1: Top 5 Trending Dishes on Zomato in Ahmedabad
• Simulated AI Query: "List the top 5 trending dishes on Zomato in Ahmedabad."
• How to Check for Hallucinations:
When an AI answers this without a live database plugin, it will typically list generic popular items (such as Khaman, Maskabun, Gujarati Thali, Biryani, or Pizza).
• Hallucination Evaluation: This is an inherent hallucination. Live trending charts change by the hour and are securely stored within Zomato's internal system database. Unless the AI model explicitly uses a live-browsing engine at that exact second to pull real metrics, it is simply using mathematical probability to guess what foods are popular in Ahmedabad.
Task 2: Grounded Prompt for IPL 2023 Final
• The Prompt:"Only use the text provided below to summarize the IPL 2023 final match. Do not add anything else, do not use outside knowledge, and do not make assumptions.Text: 'Chennai Super Kings won the IPL 2023 final against Gujarat Titans by 5 wickets.'"
• Response Verification: A well-behaved AI will output a single, direct sentence repeating only those facts. If the AI adds outside facts—such as mentioning MS Dhoni, Hardik Pandya, the Narendra Modi Stadium, or rain delays—it has failed the constraint and hallucinated/extrapolated data.
Task 3: Flipkart Product Description & Verification Prompt
• Initial Prompt:"Generate a compelling product description for a new premium wireless earbud for a Flipkart listing. Emphasize 40 hours of battery life and active noise cancellation."
• Follow-up Verification Prompt:"Is all the information in your previous answer based on real data or did you make any assumptions? List any details you invented."
• Outcome: This self-correction loop forces the AI to break character and explicitly admit that because the item is fictional, 100% of the description, branding claims, and feature implementations were completely invented.
Task 4: Prompt Refactoring for iPhone Review
• Refactored Prompt:"Write a detailed overview of the latest iPhone model using exclusively verified technical specifications and details from the official Apple website (Apple.com). Do not include external tech blog rumors, subjective opinions, or unverified features."
• Why this reduces hallucination: It strictly limits the knowledge boundaries to a single, trusted primary source, preventing the model from pulling in speculative rumors or outdated web chatter.
Task 5: BookMyShow Summary with Citations
• Designed Prompt:"Summarize the movie [Insert Movie Name] for a BookMyShow listing. For every single fact, plot point, or cast list item you provide, you must append the direct verification source URL or platform title immediately after the fact. If a fact cannot be conclusively cited, write 'source not found' next to it."
• Simulated AI Test Response:"Directed by Christopher Nolan [Source: IMDb Official Cast and Crew], the film follows a thief who extracts corporate secrets using dream-sharing tech [Source: Warner Bros. Production Notes]. The movie stars Leonardo DiCaprio [Source: Academy Awards Archive]. The exact opening weekend box office numbers in Ahmedabad are [source not found]."
